Docker CLI Installation

```
Command Prompt
Microsoft Windows [Version 10.0.19044.1766]
(c) Microsoft Corporation. All rights reserved.

C:\Users\ADMIN>docker

Usage: docker [OPTIONS] COMMAND

A self-sufficient runtime for containers

Options:
  -c, --config string      Location of client config files (default
                           "C:\Users\ADMIN\.docker")
  -c, --context string      Name of the context to use to connect to the
                           daemon (overrides DOCKER_HOST env var and
                           default context set with "docker context use")
  -D, --debug              Enable debug mode
  -H, --host list           Daemon socket(s) to connect to
  -l, --log-level string    Set the logging level
                           ("debug"|"info"|"warn"|"error"|"fatal")
                           (default "info")
  --tls                    Use TLS; implied by --tlsverify
  --tlscacert string        Trust certs signed only by this CA (default
                           "C:\Users\ADMIN\.docker\ca.pem")
  --tlscert string          Path to TLS certificate file (default
                           "C:\Users\ADMIN\.docker\cert.pem")
  --tlskey string           Path to TLS key file (default
                           "C:\Users\ADMIN\.docker\key.pem")
  --tlsverify              Use TLS and verify the remote
  -v, --version            Print version information and quit
```
